Link Repository Project

<https://github.com/ikhlaspp/booksales-api-laravel>

1. Menambahkan fungsi `index()` pada `GenreController` dan `AuthorController` mengambil seluruh data dari database dan mengembalikannya dalam format JSON menggunakan `response()->json()`. Endpoint GET `/api/genres` dan `/api/authors` digunakan untuk memanggil fungsi ini.

```
public function index()
{
    $genres = Genre::all();
    return response()->json($genres);
}
```

2. Menambahkan method `store(Request \$request)` pada masing-masing controller
Fungsi ini membaca input data, melakukan pengecekan validasi data (seperti validasi required, max, dan numeric), kemudian data tersebut disimpan ke dalam database dengan menggunakan fungsi Eloquent `create()`. Setelah berhasil disimpan, API mengembalikan respons JSON beserta status HTTP 201 Created.

```
public function store(Request $request)
{
    $validatedData = $request->validate([
        'name' => 'required|string|max:255',
        'description' => 'nullable|string',
    ]);

    $genre = Genre::create($validatedData);

    return response()->json([
        'message' => 'Genre created successfully',
        'data' => $genre
    ], 201);
}
```

3. Mendaftarkan endpoints POST baru di dalam `routes/api.php` yang mengarah pada method `store()`

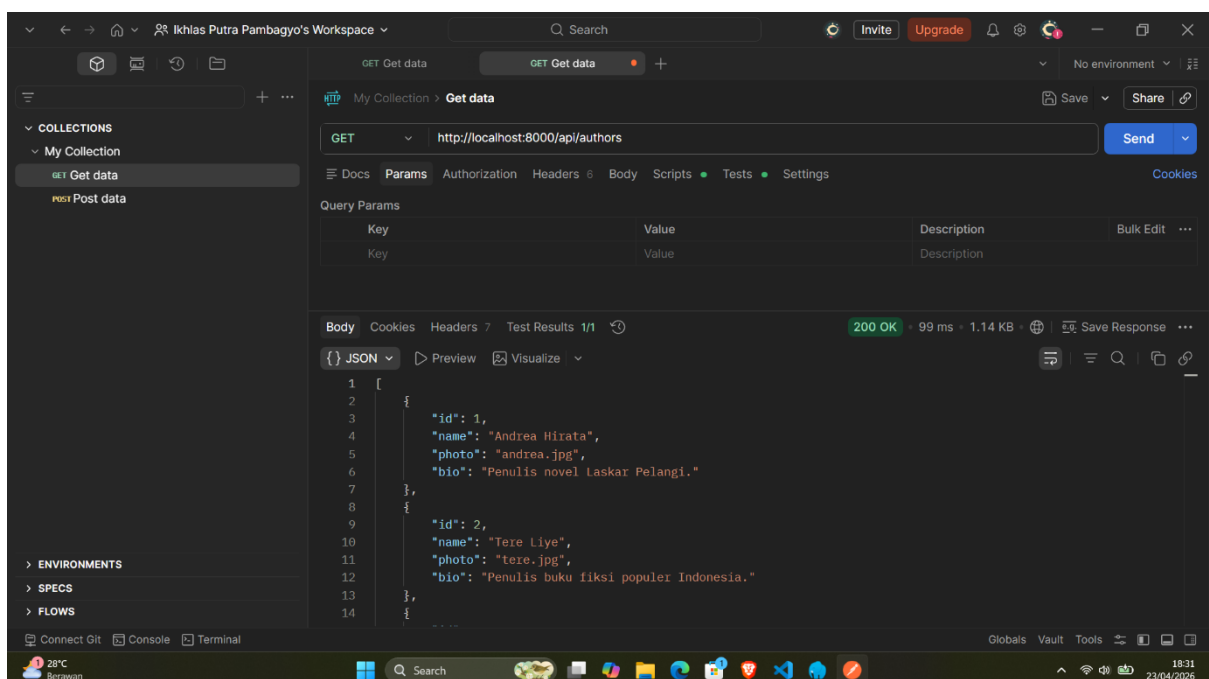

```
Route::post('/genres', [GenreController::class, 'store']);
Route::post('/authors', [AuthorController::class, 'store']);
Route::post('/books', [BookController::class, 'store']);
```

Testing API menggunakan POSTMAN

GET <http://localhost:8000/api/genres>

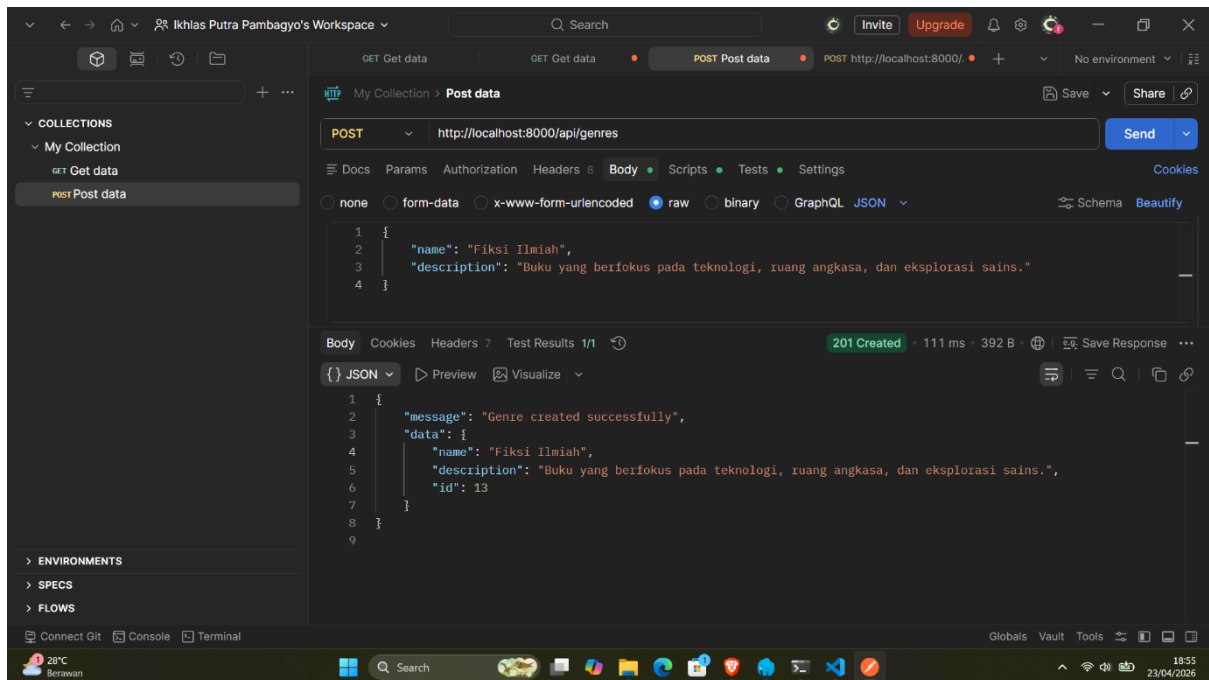

GET <http://localhost:8000/api/authors>

POST http://localhost:8000/api/genres

```
{
  "name": "Fiksi Ilmiah",
  "description": "Buku yang berfokus pada teknologi, ruang angkasa, dan eksplorasi sains."
}
```

POST http://localhost:8000/api/authors

```
{
  "name": "Andrea Hirata",
  "photo": "andrea_hirata.jpg",
  "bio": "Penulis novel Laskar Pelangi."
}
```
