1. Mengatur Ulang Controller Menjadi API

Mengubah fungsi index() pada semua controller agar mengembalikan respons dalam format JSON memanfaatkan fungsi `response()->json()`.

```
<?php
namespace App\Http\Controllers;
use App\Models\Book;

class BookController extends Controller {
    public function index() {
        $books = Book::with(['author', 'genre'])->get();
        return response()->json($books);
    }
}
```

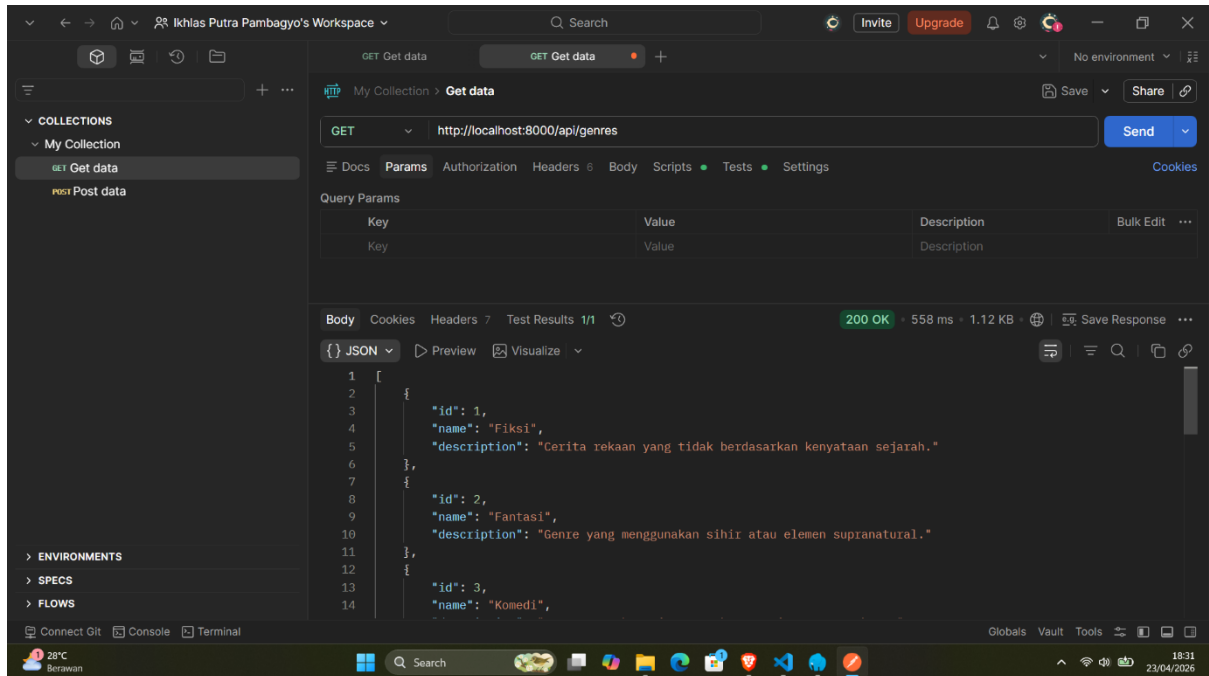

2. Mendaftarkan API Route (routes/api.php) Semua endpoint URL sekarang dipindahkan dari file routes/web.php ke file routes/api.php agar dapat diakses dengan awalan endpoint '/api' (seperti /api/books).

```
use App\Http\Controllers\BookController;
use App\Http\Controllers\AuthorController;
use App\Http\Controllers\GenreController;

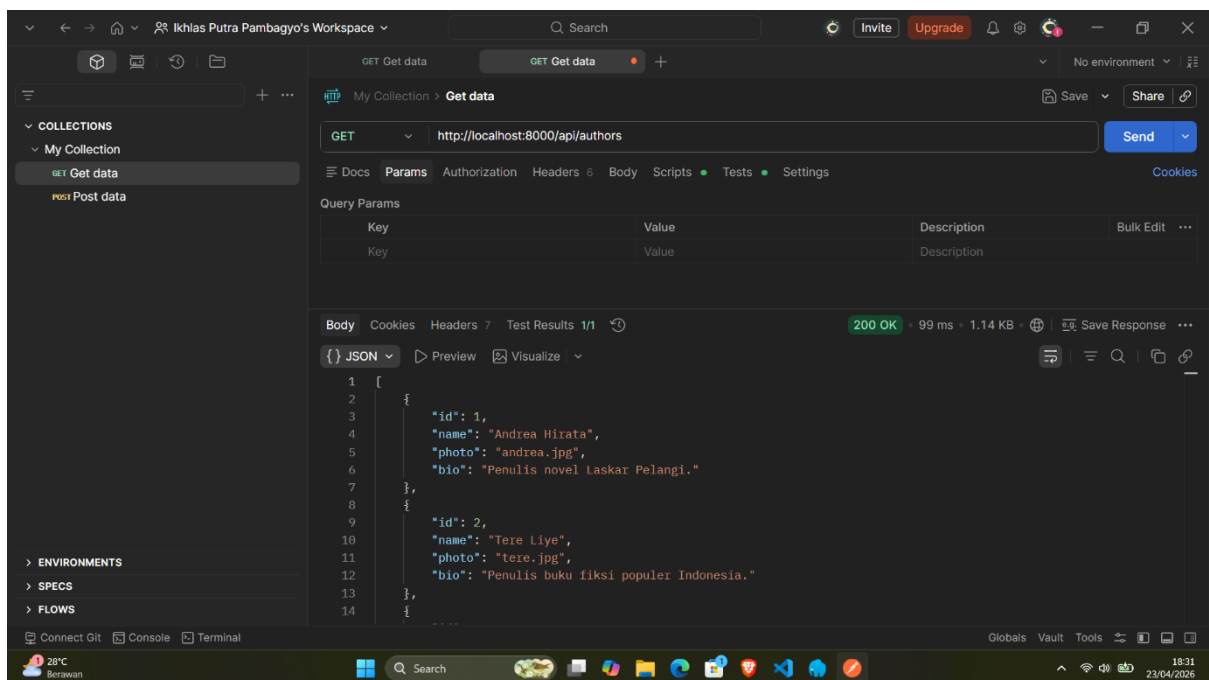

Route::get('/books', [BookController::class, 'index']);
Route::get('/authors', [AuthorController::class, 'index']);
Route::get('/genres', [GenreController::class, 'index']);
```

Testing API menggunakan POSTMAN

GET <http://localhost:8000/api/genres>

GET <http://localhost:8000/api/authors>

GET http://localhost:8000/api/books

The screenshot shows the Postman interface with a GET request to `http://localhost:8000/api/books` successfully executed. The response is a 200 OK status with a response time of 97 ms and a body size of 3.9 KB. The response body is in JSON format, showing an array of book data.

Query Params

Key	Value	Description
Key	Value	Description

Body (JSON)

```
1 [
2   {
3     "id": 1,
4     "title": "Laskar Pelangi",
5     "description": "Kisah 10 anak di Belitung.",
6     "price": "80000.00",
7     "stock": 29,
8     "cover_photo": "laskar.jpg",
9     "genre_id": 1,
10    "author_id": 1,
11    "author": {
12      "id": 1,
13      "name": "Andrea Hirata",
14      "photo": "andrea.jpg",
15    }
16  }
17 ]
```
